

Mayur Koladiya

Computer Engineer

I have gained valuable experience through various software development projects and data processing tasks. My skills encompass building REST APIs, developing service-based Android apps, creating Python automation scripts, performing web scraping with Python, image processing, web development with MERN stack, and working with databases such as MySQL, MongoDB, and Firebase. Additionally, I have knowledge and experience in core branches such as machine learning

Experience

Stock Data API

Python 2023

I have implemented a REST API using Flask and integrated Swagger GUI to provide a range of data related to stocks. The API offers various endpoints that allow users to access real-time prices, historical data, and other stock-related information. By utilizing Flask, a popular Python web framework

Student Rank Analytics

2022

Python

Developed to track and monitor the ranking of students on various coding platforms such as LeetCode, HackerRank, and CodeChef. The app employs web scraping techniques to extract the daily rank of students from these platforms. It provides real-time updates on the student's performance and maintains a historical record of their rankings.

WallCraft android app (50K+ installer)

2021

Android

This app is designed to enhance the personalization of users' phones by offering a curated collection of top-quality wallpapers. The objective is to provide users with a diverse range of visually appealing options that can be easily used to customize the appearance of their devices.
