★ PROJECTS

MoviesHub

Technologies: HTML, CSS, JavaScript, React, Material UI

The objective of this web app is to provide all information about any movies and series. It gives information about trending movies and series, give all kind of content details to user and also provide a genre to filter out types of content, give search facility to users to search any movie or series.

Blog App

Technologies: React, Node, Express, MongoDB

The "Blog App" aims to provide a comprehensive platform for bloggers to publish their content, engage with a community of readers, and explore a wide range of blog posts on diverse topics. The app provides a user-friendly interface where users can create an account and log in to write, edit, and delete their blog posts.

Social media App

Technologies: React, Node, Express, MongoDB

The "Social Media App" aims to create an engaging and user-friendly platform where users can connect with others, share their experiences, and stay updated with the latest content from their social network. The app allows users to create an account, set up a profile, and connect with friends or other users within the network. Users can post updates, share photos or videos, and write captions or comments.

Expense tracker

Technologies: HTML, CSS, JavaScript, React, Node, MongoDB

The "Expense Tracker App" is a web application designed to help users manage their personal finances by tracking and organizing their expenses. It provides an easy and efficient way to keep a record of income, expenses, and overall financial transactions. also shows overall balance so user can manage their expenditure.

✂ OTHER ACTIVITIES

- Participated in University level competitive programming competition "codepie 3.0".
- Took part in a university debate competition.
- Participated in various college level coding contests and tech events.
